Direction (Q. Nos. 51 to 55) : Read the following passage to answer the questions given below :

Even while telecom operators in India are in the midst of rolling out 4G networks, the minister for telecom has announced that India would roll in 5G by 2020, a time frame that has been accepted by international standardization bodies, vendors, and service providers in many parts of the world. South Korea and Japan want to showcase leading 5G applications in the Winter and Summer Olympics in 2018 and 2020, respectively.

However, Indian operators face several challenges for 5G roll-outs from a business point of view. They have far less spectrum in comparison to international operators. This increases their cost of operations. Many of them are also weighed down by debt. Ever faster rounds of new technology introduction when prior technology investments have

not been recouped add further complexity. This juggernaut of ever evolving generations of technology and forthcoming 5G require a supportive policy and regulatory environment. Without it, the sector's health and India's economic competitiveness would be greatly impaired. The imperatives of remaining competitive and consumer demands of faster and higher quality services leave little choice to operators but to invest in 5G.

To understand the elements of the policy and regulatory environment, we first identify the characteristics of 5G. Unlike earlier generations that provided for ever higher speeds and more bandwidth, 5G also promises ultra-reliable, very fast speeds and high bandwidth mobile connectivity and supports massive interconnected devices spread across wide areas. 5G provides peak speeds of 20 times, compared with 4G, such as that required in virtual reality applications. It is also designed to provide latency at 10 times lower than 4G. Low latency is required in applications dealing with critical emergency health care, autonomous vehicles or disaster management.

Since 5G roll-outs are likely even before 4G is extensively deployed, the adopted road map for 5G should ensure that the existing and near-future investments in 4G can be leveraged. One suggested approach has been that since operators are likely to deploy 5G in bands that they are currently using for 4G, policy should facilitate this by making spectrum usage an agnostic service. The role of wired infrastructure, especially fiber optic cables, is critical and complementary to growth of wireless. This is because very large capacities are required in the backhaul to cater to applications enabled through 5G. This would entail accelerating the BharatNet programme for deploying fiber optic cables to gram panchayats and increasing the involvement of the private sector to exploit complementarities and efficiencies of the private sector.

51. Which of the following is/are *not* true as per the passage ?

- I. The telecom Industry needs a supportive policy environment else the sector's health would be greatly impaired.
- II. 5G would provide a peak speed of 20 times *vis-a-vis* 4G.
- III. 5G would support massive interconnected devices spread across wide areas.

- (A) Only I and II
- (B) Only II and III
- (C) Only I and III
- (D) None of the above

52. Which of the following arguments is strong with respect to the statement above ?

- I. Yes. The time frame has been accepted in many parts of the world and India must follow suit.
- II. No. Telecom operators have not yet effectively implemented 4G networks and need more time.
- III. Yes. Many leading nations are keen on showing their products supporting 5G technology on International platforms and India should not be left behind.

- (A) Only III
- (B) Only II
- (C) Only I and II
- (D) Only II and III

53. As per the passage, what are some of the challenges faced by Indian operators with respect to 5G ?

I. The quality of their spectrum is poor when compared to international operators.

II. Lack of availability of debt.

III. The continuous need to invest in better technology.

(A) Only I

(B) Only III

(C) Only I and III

(D) Only II and III

54. As per passage, which of the following feature/s make/s 5G technology ideal for use in critical areas ?

I. High Speed

II. Low Latency

III. Internet of Things

IV. High Bandwidth

(A) Only II

(B) Only III

(C) Only I, II and III

(D) Only II and III

55. What are some ways to ease the transition to 5G ?

I. Deploy more wireless infrastructure.

II. Increase involvement of the private sector.

III. Spectrum usage should be made interchangeable.

(A) Only I

(B) Only I and II

(C) Only II and III

(D) All of the above
