

About the Program: PG Diploma in Criminal Forensic

The Postgraduate Diploma in Criminal Forensics is a one-year postgraduate diploma program that covers aspects of human biology and applies science and psychology to the scientific investigation of crime.

- Criminal Forensic is a broad medical subject that includes forensic pathology, psychology, forensic medicine, and ontology.
- PG Diploma in Criminal Forensic deals with the study of various methods of scientific investigation of crime.
- The course encompasses the study of documentation and its analysis, covering a broad range of interesting topics, from the evaluation of evidence to the development of methodologies to aid in the visualization process of DNA fingerprinting.
- The PG Diploma in Criminal Forensic is a broad field that applies to various facets of the judicial system, where a forensic scientist works on the findings to extract crucial data for crime investigations involving both the Défense and prosecution of criminals and victims.
- The pedagogy of this course primarily includes practical knowledge of investigating a crime by examining clues and hints that the untrained eye can overlook.
